Market Watch Report: Second Quarter June 2020

Dairy Sector

Milk production for the period January to June 2020 amounted to 37.88 million litres, a decline of 3% over the same period in 2019 when 39.25 million litres was collected. January milk collections were the highest for the period at 6.83 million litres, with June the second highest at 6.53 million litres.

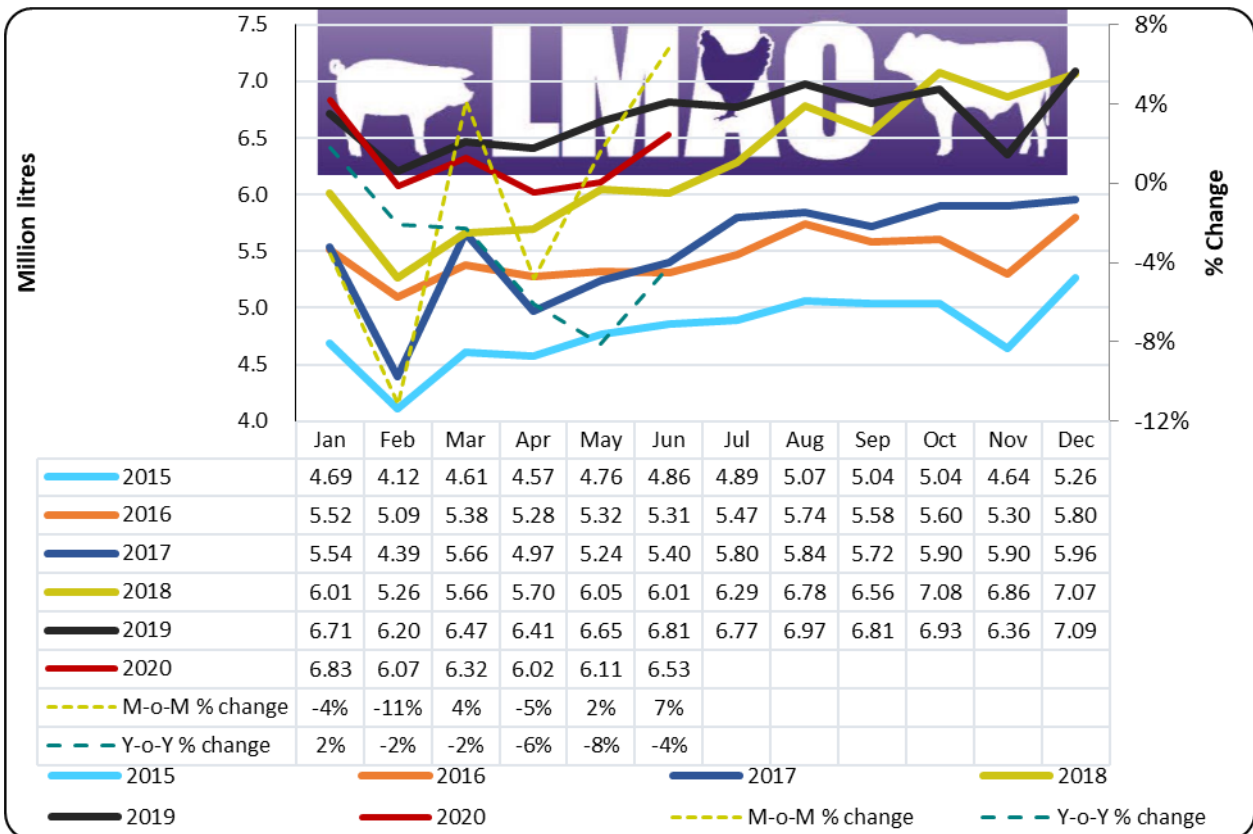

This is the second highest quantity of milk collected for the first half of the year since 2013, but also the first year-on-year decrease since 2013.

Milk collection appears to have been less affected by COVID-19 movement restrictions than other livestock sectors.

Milk Production (million litres), 2015 – June 2020

Monthly Raw Milk Production, 2015 – June 2020
